FOCUSED SKILL SET

Database Design and Management, Machine Learning / AI scripting, Project Management, Visualization of Data Analysis, Static & Dynamic Report Creation, Statistics & Probability Technology, Data Scraping Technology, Programming with Python, SQL, JSON, & JavaScript.

EXPERIENCE

2019 – Current

Data Science

- Attending courses in Data Science, SQL, Python, etc
- Use Python Libraries to extract desired data from a given URL in an automated way.
- Reverse-engineer web technologies like HTML, XML, JSON, Ajax, etc. to provide organized data.
- Manipulate acquired data in various ways to clean, extract, display, etc.

2014 - 2019

Data Analyst

Cognizant / 7-Eleven

- Successfully completed a 2+ year migration project taking 7-Eleven from an older ticketing system (HP Service Manager) to a newer one (BMC Remedy).
- Conducted research to ensure the new platform would do everything 7-Eleven needed.
- Used BMC Remedy Analytics and BMC Remedy Reporting to create reports showing that Key Performance Indicators were being met.
- Spearheaded a project to automate many of the daily tasks for the data team, such as downloading, consolidating & cleaning data loaded into the production system on a daily basis.

2011 - 2013

Data Engineer

Computer Sciences Corporation

- Worked with company development teams to identify ETL data. Created ETL scripts using SQL and Python.
- Created data models, solution designs and data architecture documentation. Managed all changes to the data models.
- Effectively articulated reasoning for data model design decisions and strategically incorporated team member feedback to produce the highest quality data models.
- Worked with project and application teams to ensure that they understood and fully complied with data quality standards, architectural guidelines and designs.

2005 - 2011

Data Architect

Xerox Corporation

- Collaborated with project managers to address data related problems in regards to systems integration and compatibility, as well as act as a leader for coaching, training and development to stakeholders.
 - Developing conceptual and logical information models within the context of the Enterprise and Line of Business Information Architecture
 - Worked with SQL, PL/SQL procedures and functions, stored procedures and packages within SQL Server.
 - Optimized existing data and app servers by using Windows built-in tuning tools and third party tools.
-
